MASA GRAMADA, MIRIAM GARCÍA

YIELD	ACTIVE TIME	REST	OVEN
1 large empanada, base + tapa	**20 min**	**ferment until doubled, no time given**	**190 °C fan, or 210 °C without fan, 20 min then 10 min more once turned**

ENERGY COST
$2.06 (30 min bake plus 30 min, 3.5 kW at 59 cents/kWh)

INGREDIENTS

600 g	Strong wheat flour (harina de fuerza, not de mucha fuerza)
300 g	Water
10 g	Salt
5 g	Instant yeast (or 10 g fresh)
40 g	Oil from the sofrito, added after fermenting

METHOD

1. Mix the flour, water, salt and yeast and knead to a smooth dough.
2. Work it until it passes the windowpane test, stretching without tearing.
3. Shape the dough into a ball and ferment it until doubled in volume.
4. Knead the sofrito oil in after the first rise, not before.
5. Divide in two, roll base and tapa, fill with cold relleno and seal the edges.
6. Bake at 190 °C with fan, or 210 °C without, for 20 min. Once it has started to colour, turn the empanada over and give it another 10 min so the base crisps.

NOTES

Hydration is a clean 50%, 300 g water to 600 g flour, which the source calls "de libro de panadería". The fat is small and late: 40 g of oil, 6.7% of flour weight, the lowest of the six doughs here.
The technique that defines it: the sofrito oil goes in after fermentation, not before, so the yeast works better.
Use harina de fuerza and not de mucha fuerza. It gives structure without going leathery.
Produces a juicy, bread-like empanada with a springy crumb.
A fan oven browns more evenly, so watch the last few minutes.
Turning the empanada over for the last 10 min is the source's own step, and it defends it as the way to crisp the base.
The source sets no clock on the ferment, only "until doubled". Its recipe card gives 3 h of preparation and 50 min of cooking, 3 h 50 min in total, so any fixed rise time here would be invented.
The clearest taught of the gramada doughs, good for learning the technique.
