# QUICHE

| MAKES | ACTIVE TIME | REST | TOTAL TIME |
|---|---|---|---|
| **1 quiche, 25 cm, 6 to 8 servings** | **20 min** | **at least 20 min on a rack before slicing** | **1 h 20 min** |

OVEN
**375F for 10 min, then 325F for 30 min**

## INGREDIENTS

| | |
|---|---|
| **1 batch** | Flaky tart dough, baked out fully and cooled in a 25 cm deep tart pan or pie pan |
| **5** | Eggs, large |
| **30 g** | All-purpose flour |
| **240 g** | Crème fraîche |
| **240 ml** | Whole milk |
| **1 tsp** | Salt |
| **1/2 tsp** | Black pepper, ground fresh |
| **1 tbsp** | Thyme, fresh, chopped fine |
| **115 g** | Sharp cheese, Gruyère or Cheddar, grated |

## METHOD

1. Make the flaky tart dough, line a 25 cm deep tart pan or pie pan with it, and bake the shell through. Let it cool before you fill it.
2. Heat the oven to 375F [190C].
3. Beat one egg with all the flour until smooth. Use a stand mixer on high with the paddle fitted, or a large bowl and a whisk.
4. Add the other four eggs and mix only until the custard is even.
5. Whisk the crème fraîche in a medium bowl until it is perfectly smooth, then whisk the milk into it.
6. Hold a fine-mesh sieve over the milk mixture and pour the egg mixture through it.
7. Whisk the salt, the pepper and the thyme in, then stir the grated cheese through.
8. Pour the custard into the cooled shell.
9. Bake 10 minutes, then drop the oven to 325F [160C] and give it about 30 minutes more, until the filling is just set. Touched at the centre it should feel slightly firm rather than liquid.
10. Leave it on a wire rack a good 20 minutes at least, so the custard finishes setting and the slices hold their edge. Serve warm or at room temperature.

## NOTES

Two things set this filling apart from most. Crème fraîche stands in for some of the dairy, adding richness and a faint tartness, and there is 30 g of flour in the custard.
The custard can be mixed up to 4 days ahead and kept covered in the fridge. The flour settles out, so whisk it hard before pouring.
Up to 85 g of raw coarsely chopped chard or spinach can go straight into the egg mixture. At that weight the liquid the greens give off does not spoil the set. Anything more has to be cooked and wrung dry first.
A brim-full shell is hard to carry. Fill it three-quarters, bake until the surface has barely set, then pour in the rest and carry on.
To warm a fully cooled quiche, cover it with foil and put it in a 325F [160C] oven for about 15 minutes. Tightly wrapped, it keeps 4 days in the fridge and is good cold as well.

DOUGH
## Flaky Tart Dough

*Makes: 2 tart or pie shells, 23 or 25 cm, or 12 tartlet shells at 10 cm / Active Time: 25 min / Rest: 2 h chilled minimum or overnight, then 30 min to 1 h once lined / Total Time: 3 h 30 min to 4 h / Oven: 375F / 190C, about 20 min partially baked or 30 min fully baked*

**INGREDIENTS**

| | |
|---|---|
| **1 tsp** | Salt |
| **150 ml** | Water, very cold |
| **455 g** | All-purpose flour |
| **300 g** | Unsalted butter, very cold |

**METHOD**

1. Stir the salt into the cold water until it dissolves. Keep the bowl refrigerated until you need it.
2. Cut the butter into 2.5 cm pieces.
3. Using a food processor, weigh the flour into the processor bowl and scatter the butter across the top. Pulse briefly, stopping at coarse crumbs with plenty of butter still at pea size. Pour in the salted water and pulse a few seconds more, until the dough is clumping toward a ball but is still rough and you can see chunks of butter in it.
4. Working by hand, weigh the flour into a mixing bowl and scatter the butter over the top, then cut it in with a pastry blender or two knives to the same coarse crumb, leaving pea-size butter. Drizzle the salted water over and stir with a fork to a shaggy mass, then bring it gently together into a ball. Stop while it is still rough with butter showing.
5. Split the dough in two on a lightly floured bench and pat each half into a disk 2.5 cm thick. Wrap tightly and chill at least 2 hours, or overnight.
6. To line a pan, roll a disk out to 3 mm on a lightly floured surface, working from the middle outward in every direction. Lift the sheet and swing it a quarter turn every few passes, dust underneath whenever it grabs, and move fast so the butter stays cold.
7. For a pie dish, cut a circle 5 cm wider than the dish. For a tart pan with a removable base, cut it 4 cm wider.
8. Fold the round in half or into quarters to carry it, lay it in the pan, settle it into the bottom and up the sides, and press it home gently. Trim it flush with the rim using a sharp knife.
9. In a pie dish you can instead leave a 12 mm overhang, fold it under itself and crimp or flute the edge. The bakery leaves the edge plain.
10. A shell that goes into the oven unbaked only needs refrigerating until you use it, covered with plastic wrap if that is overnight.
11. A shell you intend to blind bake has to be chilled firm to the touch first, 30 minutes to 1 hour. This is what buys you the flakiest crust.
12. Heat the oven to 375F. Line the chilled shell with parchment paper and fill it with pie weights.
13. For a partially baked shell, give it about 20 minutes, until the surface is dry and pale with no damp opaque patches left. Lift a corner of the paper to check. Lift out the weights and paper and return the shell for a few minutes more.
14. Watch the base while it bakes. If it domes up, pierce it with the tip of a knife, keeping the hole small if a very liquid filling is going in.
15. For a fully baked shell, run about 25 minutes under the weights, until the surface is light brown. Take out the weights and paper and bake 5 minutes more, to golden brown.
16. Cool the shells completely on wire racks before filling them.

**NOTES**

455 g flour to 300 g butter to 150 ml water is the 3:2:1 ratio by weight the dough is built on, so it scales up and down directly.
The pea-size butter is the whole point. Rolled out, the sheet should show faint streaks of butter.
Chilling before the bake sets pockets of flour and water around each piece of butter. Those pockets survive the oven and give the fork-tender texture.
For the einkorn version, replace the all-purpose flour with equal parts pastry flour and einkorn flour.
Tartine also mixes this dough by a longer method that comes out closer to rough puff. That version is the one used for galettes.
