# FETTUCCINE

| REGION | REST |
| --- | --- |
| **Central Italy, mainly Lazio** | **20-30 min at room temperature** |

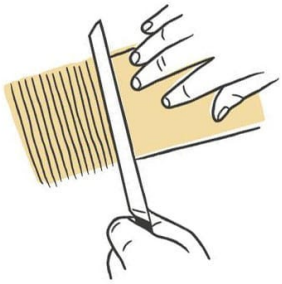

## METHOD

1. Make an egg-based dough, then roll and sheet it.
2. Give a wooden work surface a light dusting of 00 flour. Line a sheet pan with parchment, then dust the parchment with semolina.
3. Knife the sheets into 18-inch lengths and trim the ragged edges off. Save the trim for soup. Keep the sheets under plastic or a towel while you work.
4. Fit the fettuccine cutter to a hand-crank machine or the KitchenAid attachment.
5. Hold one end of a sheet, feed the other end into the cutter, and crank steadily, keeping the sheet close to perpendicular to the rollers. Catch the strands underneath with your free hand.
6. Dust the cut strands generously with 00 flour and shake them apart. Coil the batch into a nest on the pan.
7. Repeat with the rest of the sheets.
8. Dry 20 to 30 minutes at room temperature.
9. To hold, cover the pan with plastic and refrigerate up to 24 hours.

## NOTES

To cut by hand instead of by machine: fold a sheet in half, then in thirds, into a packet roughly 4 1/2 by 6 inches. Turn it so the long side faces you, trim the ends, then slice 1/4-inch strips working inward from one edge. Rejoin the method at the dusting step.
Hand-cut width is 1/4 inch. The book gives no separate figure for the machine cutter.
Rolled to the same thinness as tagliatelle in this book. The two are told apart by width and by cut: fettuccine narrower and straight-edged, tagliatelle wider and fluted.
Coiled into a nest rather than a horseshoe.
Refrigerated shelf life is 24 hours.
Served with butter, parmigiano, and black pepper, never cream, plus whatever vegetables or pantry items are on hand.

DOUGH

## Egg Dough

*Makes: 954 g / Active Time: 8-10 min kneading / Rest: 30 min minimum, wrapped*

**INGREDIENTS**

| | |
|---|---|
| **500 g** | Tipo 00 flour |
| **454 g** | Egg yolks |
| **as needed** | Extra 00 flour for kneading |
| **up to 1 tbsp, only if dry** | Room-temperature water |

**METHOD**

1. Mix the yolks lightly, without beating them.
2. Mound the flour on a wooden surface and open a well 5 to 6 inches across. Wider than that and the walls collapse.
3. Add half the yolks, drawing in flour from the inner wall with a fork, working round the circumference.
4. Add the rest the same way. If the wall breaks, scrape the escape back into the flour until the mass holds itself.
5. Knead 8 to 10 minutes: press down and away with the heel of your hand, rotate 180 degrees, fold, repeat. Scrape your hands and the board as you go.
6. Add water a tablespoon at a time only if it stays dry and refuses to come together.
7. Stop when it is smooth, firm, and springs back slightly when poked. The texture to aim for is Play-Doh.
8. Wrap and rest at least 30 minutes before rolling.

**NOTES**

454 g of yolks is roughly 24 to 26 eggs, so plan what the whites are for.
Yolks only, no whites and no whole eggs, which is what makes this rich and tender rather than elastic.
Dry winter air is the usual reason it will not come together. Flour the board sparingly, since excess dries it out.
Keeps 24 hours. Chilled overnight, pull it out 20 minutes before rolling.
