TAGLIATELLE

REGION	REST
Emilia-Romagna and neighboring regions. Called fettuccine in Lazio	**20-30 min at room temperature**

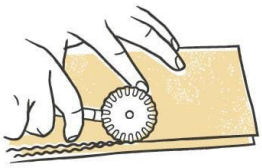

METHOD

1. Make an egg-based dough, then roll and sheet it.
2. Give a wooden work surface a light dusting of 00 flour. Line a sheet pan with parchment, then dust the parchment with semolina.
3. Knife the sheets into 12-inch lengths and trim the ragged edges off. Save the trim for soup.
4. Dust each sheet lightly with 00 flour and stack them neatly two or three high. Run a fluted pastry cutter around every edge of the stack so all the edges come out ruffled.
5. Starting at the long edge of the stack, cut 1/2-inch strands working inward. A ruler or straightedge keeps the lines even while you get used to the fluted cutter.
6. Dust the strands generously with 00 flour and shake them apart. Bend the batch into a horseshoe and set it on the pan.
7. Repeat with the rest of the sheets.
8. Dry 20 to 30 minutes at room temperature.
9. To hold, cover the pan with plastic and refrigerate up to 24 hours.

NOTES

Cut width is 1/2 inch, with a fluted pastry cutter.
Bologna's Accademia Italiana della Cucina specifies 1/3 inch. Robbins goes wider on purpose, because her tagliatelle and her fettuccine are rolled to the same thinness and the width is what separates them. Widths vary across the region anyway.
The fluted cutter is Robbins' own distinction for this shape, not a traditional requirement.
Sheets are 12 inches long, stacked two or three high to cut.
Shaped into a horseshoe rather than a nest.
Refrigerated shelf life is 24 hours.
Suits a hearty ragu, or light butter-and-cheese sauces carrying seasonal vegetables such as mushrooms or zucchini.

DOUGH

Egg Dough

Makes: 954 g / Active Time: 8-10 min kneading / Rest: 30 min minimum, wrapped

INGREDIENTS

500 g	Tipo 00 flour
454 g	Egg yolks
as needed	Extra 00 flour for kneading
up to 1 tbsp, only if dry	Room-temperature water

METHOD

1. Mix the yolks lightly, without beating them.
2. Mound the flour on a wooden surface and open a well 5 to 6 inches across. Wider than that and the walls collapse.
3. Add half the yolks, drawing in flour from the inner wall with a fork, working round the circumference.
4. Add the rest the same way. If the wall breaks, scrape the escape back into the flour until the mass holds itself.
5. Knead 8 to 10 minutes: press down and away with the heel of your hand, rotate 180 degrees, fold, repeat. Scrape your hands and the board as you go.
6. Add water a tablespoon at a time only if it stays dry and refuses to come together.
7. Stop when it is smooth, firm, and springs back slightly when poked. The texture to aim for is Play-Doh.
8. Wrap and rest at least 30 minutes before rolling.

NOTES

454 g of yolks is roughly 24 to 26 eggs, so plan what the whites are for.
Yolks only, no whites and no whole eggs, which is what makes this rich and tender rather than elastic.
Dry winter air is the usual reason it will not come together. Flour the board sparingly, since excess dries it out.
Keeps 24 hours. Chilled overnight, pull it out 20 minutes before rolling.
