WHOLE GRAIN SOURDOUGH

MAKES	REST	OVEN	ENERGY COST
1 loaf	**2 h at room temperature after shaping**	**475F, 55-60 min total**	**$3.10 (60 min bake plus 30 min, 3.5 kW at 59 cents/kWh)**

PRICE
$9

DETAILS

- Tags: vegan

INGREDIENTS

300 g	Bread flour
200 g	Whole wheat flour
350 g	Water
10 g	Salt
quantity not recorded yet	Active starter

METHOD

1. Roll the dough up, giving it tension as you go.
2. Leave it seam side up and rest 2 hours at room temperature.
3. Preheat to 475F.
4. Bake 20 minutes with the lid on.
5. Remove the lid and bake 30 minutes more.
6. Finish 5 to 10 minutes out of the dutch oven.

NOTES

475F, hotter than the high hydration sourdough at 450F, and the final stint comes out of the pot entirely.
200 g of whole wheat against 300 g bread flour is 40% wholegrain.
350 g water to 500 g total flour is 70% hydration before the starter, stiffer than the 75% high hydration loaf.

LEARNINGS

- Only the shaping and bake schedule are recorded, transcribed from a notebook page whose facing side was cut off in the photo. Missing: the starter quantity, the mixing order, and the bulk rise time. The ingredient weights here come from the old bakery site data, not the notebook, so they need checking against it.
- Photograph the full spread, both pages, and this becomes a complete recipe.
