

PEACH GALETTE

INGREDIENTS

quantity not recorded	Peaches, washed and cut
quantity not recorded	Sugar, for macerating

METHOD

1. Make and chill the galette crust.
2. Wash and cut the peaches, toss them with some sugar, and leave them to macerate in the fridge before using.
3. Drain them before they go on the pastry.
4. Arrange over the rolled-out crust, fold the border over, and bake.

NOTES

Macerating first is the point. Sugar pulls water out of the peaches in the fridge, so it ends up in the bowl rather than in the pastry.
 Drain what the maceration releases. Tipping it onto the crust undoes the whole step.
 Quantities were not recorded. The peach weight, the sugar, the oven temperature and the bake time all still need filling in.
 Crust is assumed to be the same whole wheat galette dough as the zucchini one, since that is the galette dough in this collection. Only the peach treatment was specified.

DOUGH

Whole Wheat Galette Crust

Yield: 1 galette, serves 6

INGREDIENTS

1 cup	Whole wheat flour
1/2 cup	All-purpose flour
2 tsp	Sugar
1 tsp	Diamond Crystal kosher salt
10 tbsp	Unsalted butter, chilled, in 1/2 inch pieces
1/2 cup	Ice water

METHOD

1. Whisk the flours, sugar and salt together.
2. Toss the chilled butter through the flour and work it in until the pieces are flattened but still visible. Do not rub it to sand.
3. Add ice water a little at a time, tossing, until it just holds together.
4. Shape to a disc, wrap, and chill before rolling.

NOTES

Two thirds whole wheat to one third all-purpose, which is where the nutty flavour comes from.
 10 tbsp of butter to 1.5 cups of flour is a high fat ratio, and the 1/2 inch pieces are meant to stay visible. Those sheets of butter are what make it flaky rather than short.
 Ice water, and chilled butter, both non-negotiable for flakiness.
 The source is a video. Its description lists these quantities but not the mixing steps, so the method below is the standard sequence for a flaky pastry of this type rather than a transcript.
