# SEMOLINA DOUGH

| MAKES | ACTIVE TIME | REST |
|---|---|---|
| **750 g** | **8-10 min kneading** | **30 min minimum, wrapped** |

## INGREDIENTS

| | |
|---|---|
| **325 g** | Tipo 00 flour |
| **175 g** | Semolina flour |
| **250 g** | Lukewarm water |
| **up to 1 tbsp, only if dry** | Room-temperature water |

## METHOD

1. Stir the two flours together thoroughly, then mound on a wooden surface with a well 5 to 6 inches across.
2. Add the water slowly. Water has no body of its own, so it escapes far more easily than yolks do.
3. Draw in flour from the inner wall with a fork as you pour, working round the circumference until all the water is in.
4. Knead 8 to 10 minutes, pressing down and away, rotating, folding.
5. Add water by the tablespoon only if it stays dry.
6. Wrap and rest at least 30 minutes.

## NOTES

Eggless, so it stays more elastic and less tender than egg dough. Do not expect the Play-Doh feel here.
50% hydration against 500 g total flour.
65% of the flour is 00 and 35% semolina.
Keeps 24 hours. Chilled overnight, pull it out 20 minutes before rolling.

## PRESERVING

Make the full batch, then freeze whatever you will not roll out. Refrigerated dough is only good for about 24 hours, so freezing is the answer past that rather than trying to stretch it.
Divide into portions before freezing, sized to one meal, so you thaw only what you need.
Flatten each portion into a disc rather than a ball. It freezes faster and thaws evenly.
Wrap tight in plastic, then bag it. Exposed dough dries and picks up freezer burn.
Thaw overnight in the fridge, then leave it out 20 minutes to come back to room temperature before rolling.
Do not refreeze thawed dough.
Being eggless, this is the most forgiving of the four to freeze.
