MASA DE MAÍZ, OLLEROS

YIELD	ACTIVE TIME	REST	OVEN
about 2130 g of dough, in 300 g balls for 20 cm trays	**20 min**	**1 h ferment, then about 30 min once assembled**	**230 °C, about 25 min**

ENERGY COST
$1.89 (25 min bake plus 30 min, 3.5 kW at 59 cents/kWh)

INGREDIENTS

700 g	Precooked corn flour (harina de maíz precocida, P.A.N.)
300 g	Galician rye flour
200 g	Liquid sourdough starter (masa madre líquida)
900 g	Water
10 g	Yeast (type not specified)
20 g	Salt

METHOD

1. Mix the corn and rye flours with the salt in a wide bowl.
2. Dissolve the yeast and the starter in warm water.
3. Bring liquids and flours together and work to a dense, homogeneous dough. Corn and rye drink a lot of water and barely develop gluten.
4. Rest 1 h to ferment and come to temperature. It rises very little, which is expected — this is rustic, not a springy bread dough.
5. Divide into 300 g balls, one base per 20 cm tray. It will not roll as thin as a wheat dough.
6. Line the tray with one base, fill, and cover with a second base.
7. Brush the surface with sofrito oil and leave to ferment about 30 min.
8. Bake at 230 °C for about 25 min.

NOTES

The odd one out: a cereal dough, rustic and aromatic, closer to corn bread. Do not expect fineness or crispness. It is the empanada de millo.
900 g water against 1000 g flour is 90% before the 200 g of liquid starter is counted. The source calls the hydration ~95-100%. It only works because precooked corn and rye absorb that much water without going claggy.
No fat inside the dough at all, the only one here like that. The oil is brushed on the outside purely to brown it.
The corn flour has to be precooked, P.A.N. type. Not cornstarch, not raw polenta.
Galician rye brings flavour and colour and can be swapped for wholegrain rye.
Hot and short: 230 °C seals the surface and cooks the inside fast.
Javier Olleros, Culler de Pau, O Grove, 2 Michelin stars.
